### Function Diagram - dev.fe-helpers.clj

```
redux-state:  
- Reads root Redux store from React internals  
- Returns entire Redux state  
  
current-card:  
- Gets qb.card from redux-state  
  
current-legacy-query-js:  
- Extracts dataset_query from current-card  
  
current-query:  
- Reads __MLv2_query from window global
```
